Task Tracker — JTRONIX Frontend Internship Assessment

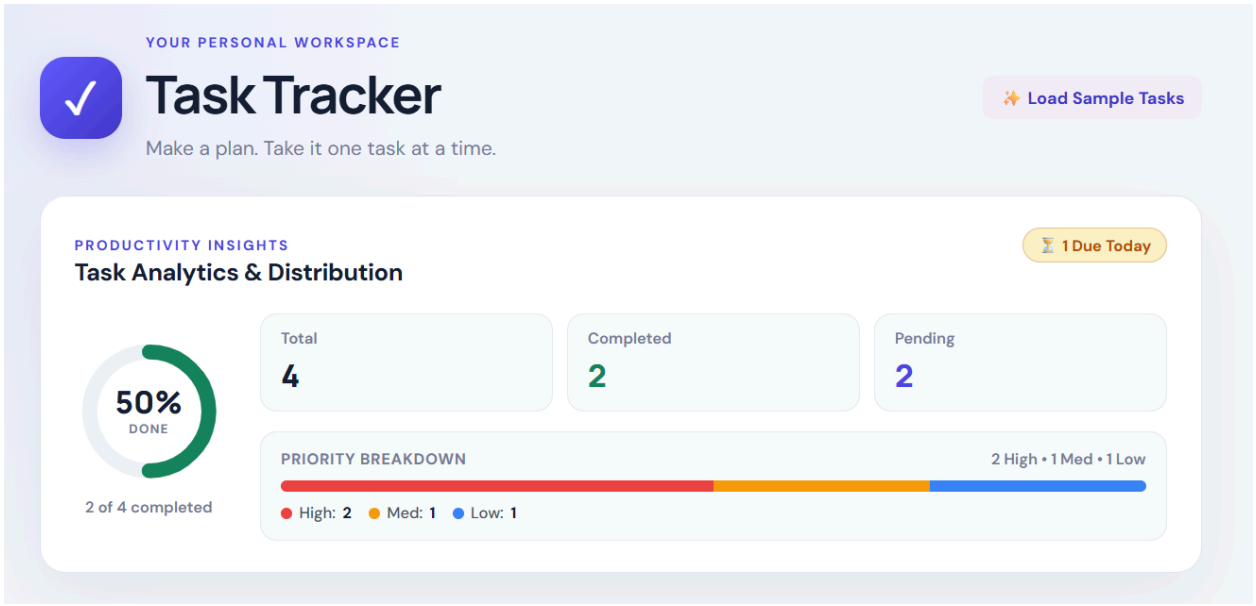

A responsive task-tracking website built with HTML, CSS, and vanilla JavaScript.

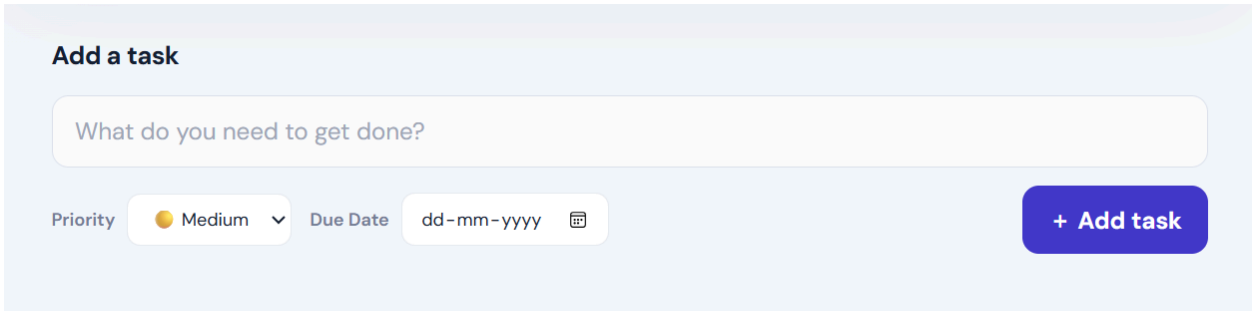

Features
- Add tasks with priority and optional due dates
- Mark tasks as completed or pending
- Edit and delete tasks (with Undo after deletion)
- Search, filter, and sort tasks
- View task progress and priority analytics
- Load sample tasks to try the features
- Export and import tasks as a JSON backup
- Automatically save tasks in your browser using localStorage
- Responsive layout for desktop, tablet, and mobile

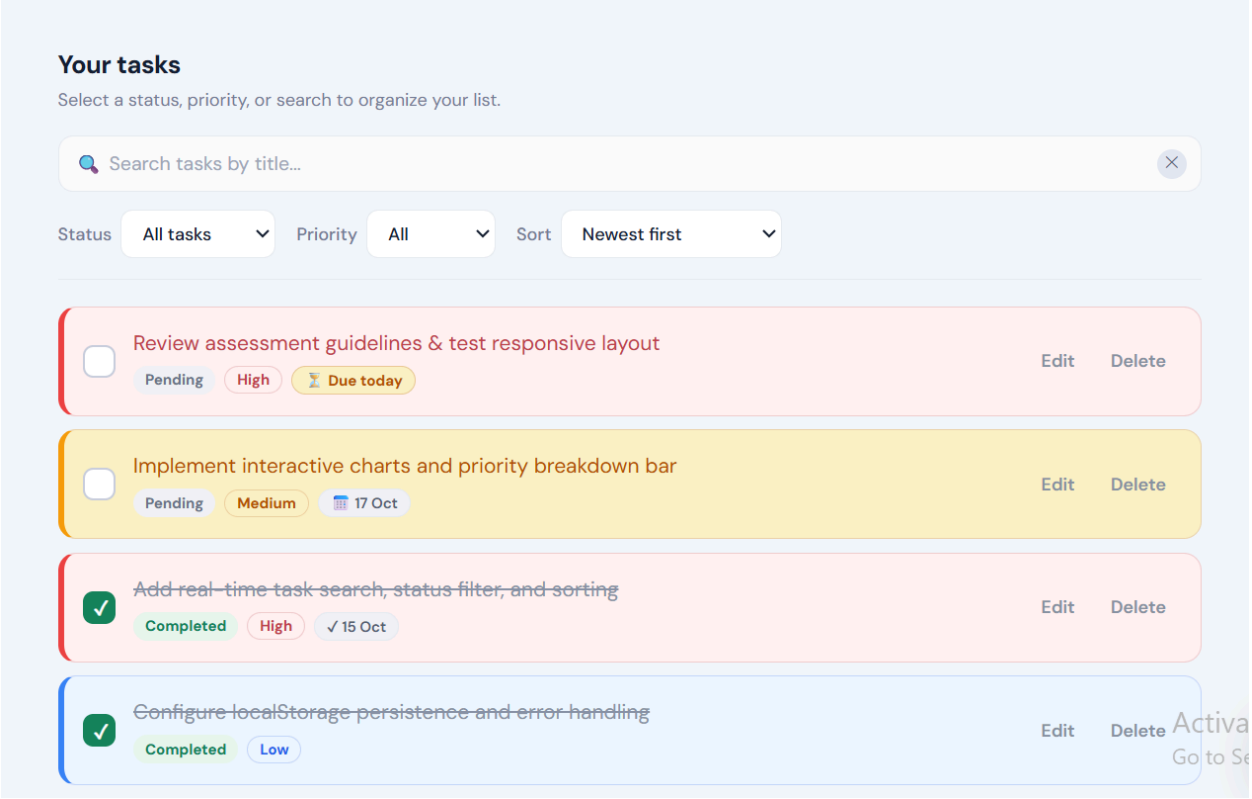

How to Run
1. Download or extract the project folder.
2. Keep `index.html`, `style.css`, and `script.js` in the same folder.
3. Open `index.html` in a browser such as Chrome, Edge, or Firefox.
4. Alternatively, open the folder in VS Code and run `index.html` with the Live Server extension.
5. Click **Load Sample Tasks** to explore the application, or add your own tasks.

No backend, database, npm installation, or build step is required.

Project Files
- `index.html` — Website structure and interface
- `style.css` — Styling and responsive layout
- `script.js` — Task management, analytics, filters, sorting, and browser storage
